About

An enthusiastic developer with expanding foundation in Backend Technologies, including Java Servlets, JSP, MongoDB and learning Spring and SpringBoot, also experienced in Basic Python Project Development. Currently exploring the field of Backend Development as well as ML and DL Algorithms, and enhancing problem solving skills in Data Structures and Algorithms. Highly interested in domains like ML, Cyber Security Cryptography Protocols, and Data Analytics.

Education

VIT Bhopal University

Sept 2023 – May 2027

B.Tech., Computer Science Engineering - AI/ML, CGPA – 8.91

Skills

- **Frontend Development**
 - HTML
 - CSS
- **Backend Development**
 - Java Servlets
 - Jakarta Server Pages (JSP)
 - MongoDB
 - MySQL
- **Data Analytics**
 - Matplotlib
 - Power BI
- **Languages**
 - Python
 - Java
- **Libraries & Frameworks**
 - Tkinter
 - Java AWT & Swing
 - Java Native Access
 - Java Security

Achievement

Co-Authored a research paper ("Fine-Tuning for Code Intelligence: Evaluating LLMs on Custom Programming Benchmarks" at CICBA 2025) presented in an International Conference hosted by Jadavpur University and sponsored by IEEE.

Certifications

Applied Data Analytics

Issuing Authority – CEC, NIT Raipur

Jun 2025

Cloud Computing

Issuing Authority – NPTEL

May 2025

Projects

Library Management System

- Developed a DBMS integrated library management system with python programming.
- Used Python 3.12 & MySQL for easy understanding and smooth management.
- Currently working to make GUI for the same using Tkinter.

Snake Game

- Built a basic snake game with features like score calculation & speed adjustment as per score increment.
- Utilized Java AWT & Swing for the same.

Basic Water Quality Analysis

- Built from the concepts learnt in Applied Data Analytics course
- Used components and skills like Data Cleaning and Visualisation, Feature Selection, Model Training and Evaluation using different concepts of Applied ML and Statistics.
- Tech Stack used was Frameworks and Libraries from Python for computation like Matplotlib, Seaborn, Numpy, and sklearn for classifiers usage
- Finally dataset is integrated with a Power BI dashboard for GUI representation and usage.

GarudaVPN (Ongoing Project)

- Developing a Virtual Private Network(VPN) using core concepts of Java and Java Native.
- Currently setting up for local packet transmission control in a system.
- Uses key concepts for developing a VPN with core language being Java, are Public Key Cryptography using Elliptic Diffie-Hellman Curve(X25519), Key Pair Derivation/Computation using HKDF & Exchange using Socket Programming, Encrypting/Decrypting Plain Text using AES, and Secure VPN tunnel.
- Core Components are OpenVPN for providing virtual tunnel, BouncyCastle API for Cryptographic Protocol Implementation, System Programming using Native Access.
